AUTOMOTIVE PRODUCTS

Infotainment, Driver Assistance, Rear Camera Display, EV/HEV Solutions, Interior and Lighting
Intersil, with a proven history of providing innovative and highly reliable ICs for the space, consumer, computing, and industrial markets, is uniquely qualified to meet the challenging requirements of the automotive industry.

Over the past few years Intersil has invested in key technologies to address the current mega trends within the automotive market such as safety, efficiency, connectivity and affordability.

This effort has resulted in leadership positions in high performance power conversion, state-of-the-art precision analog, cell balancing and battery charging ICs, power management, and highly-flexible TFT display controllers.

Intersil has also invested in TS16949 certification of internal fabs and the development of proprietary process technologies (including smart power) for automotive. With a strong balance sheet and a dedicated organization of automotive professionals, Intersil is committed to delivering world class automotive solutions for you and your customers.
Intersil has invested in key technologies to address the current mega trends within the automotive market such as environment, safety, information and affordability. This effort has resulted in leadership positions in high performance power conversions, state-of-the-art precision analog, cell balancing and battery charging ICs, power-efficient class D audio amplifiers, and highly flexible TFT display controllers.

AEC-Q100 Qualification
AEC-Q100 is a failure mechanism based stress test qualification for packaged integrated circuits. The Automotive Electronics Council (AEC) is based in the United States and was originally established by three major automotive manufacturers for the purpose of establishing common part-qualification and quality-system standards. AEC-Q100 is an industry standard specification that outlines the recommended new product and major change qualification requirements and procedures for packaged integrated circuits.

Intersil offers both standard and AEC-Q100 qualified products for automotive applications. Not all Intersil products are designed nor intended for use in automotive applications. Products that are qualified for and meet AEC-Q100 requirements are clearly designated in their datasheet.

Please visit the Quality and Reliability section of our website to view certification documentation.

AUTOMOTIVE POWER PRODUCTS

From single and multiple core embedded processors to GPUs and FPGAs, Intersil has a wealth of power experience to deliver versatile and efficient power solutions for your next Infotainment, Navigation or Telematics platform. Today Intersil offers a rapidly expanding range of point-of-need DC/DC controllers and regulators offering the best in features, performance, efficiency and size.

BATTERY CHARGERS

ISL78692: 4.1V Single-cell Battery Charger

The ISL78692 is an integrated single-cell Li-ion or Li-polymer battery charger capable of operating with an input voltage as low as 2.65V (cold crank case). This charger is designed to work with various types of AC adapters or a USB port.

- Up to 1A charging current
- 4.1V charging voltage
- Low leakage current from VBAT (3.0µA max)
- Thermal foldback of charging current at 100°C

Provides a Complete Charging Solution

With guaranteed < 3.0 uA reverse battery leakage
LINEAR REGULATORS

ISL78302: Dual LDO with low noise, very high PSRR and low IQ

- Integrates two 300mA high performance LDOs
- Excellent transient response to large current steps
- ±1.8% accuracy over all operating conditions
- Excellent load regulation: < 0.1%
- Low output noise: typically 30μVRMS @ 100μA (1.5V)
- Very high PSRR: 90dB @ 1kHz
- Extremely low quiescent current: 42μA (both LDOs active)

ISL78310: High performance 1A LDO

- 2.2V to 6V input supply
- 130mV dropout voltage typical (Iq 1A)
- Fast load transient response
- ±0.2% initial VOUT accuracy
- Adjustable in-rush current limiting
- 58dB typical PSRR
- 63μVRMS output noise at VOUT = 1.8V
- Power-good feature

- Supply-independent 1V enable input threshold
- Short-circuit current protection
- 1A peak reverse current
- Any cap stable with minimum 10μF ceramic
- ±1.8% guaranteed VOUT accuracy for junction temperature range from -40°C to +125°C
- 10 Ld DFN package

OFF-BATTERY LINEAR REGULATORS

ISL78301 / ISL78307: 40V, Low Iq, 50mA and 150mA linear regulators

- Optimized for “always-on” applications
- 21μA quiescent current (typical)
- Withstands 45V load dump
- Operates down to 3V during cold cranking
- Low 300mV dropout voltage
- 50mA (ISL78307) or 150mA (ISL78301) output

- +3.3V, +5.0V or 2.5-12V adjustable output
- Stable operation with 10μF output capacitor
- Shutdown input (EN)
- Thermal protection
- Current limit protection
- -40°C to +125°C operating temperature range
- Thermally enhanced 8 Ld SOIC (78307) and 14 Ld HTSSOP (78301) packages
OFF-BATTERY SWITCHING REGULATORS

ISL78201/ISL78206: 40V 2.5A boost-buck (ISL78201) and 40V 2.5A synchronous buck (ISL78206) regulators

- 3V to 40V input range
- Pin-for-pin compatible buck with boost pre-regulator for start-stop and cold crank operation (ISL78201); Buck only (ISL78206)
- Single inductor non-inverting buck-boost (ISL78201, I_out <= 1.2A)
- Flexible device operational topologies
  - Buck with pre-boost
  - Synchronous buck
  - Standard buck
- Forced PWM or PWM/PFM Mode
- Programmable load boundary between PFM and PWM modes
- Optional PFM under light load
- ISL78201 starts-up with V_in = 3V
- 4A integrated HS FET
- Programmable frequency from 200kHz to 2.2MHz
- 200µA quiescent current, 3µA shutdown current
- Programmable cycle by cycle current limit
- Frequency fold back feature
- -40°C to +125°C operating temperature range
- 20 Ld HTSSOP package
ISL78268: 55V synchronous buck controller with integrated 3A driver

- Constant Current Regulation
- Adaptive Dead Time Control
- Adjustable switching frequency from 50kHz to 1.1MHz
- Low shutdown current of 1μA
- Adjustable slope compensation
- Selectable diode emulation
- Selectable hiccup or latch-off fault response
- 4x4mm QFN package

Applications

- Automotive power
- Telecom and industrial power supplies
- General purpose power
- Supercap charging

SYNCHRONOUS BOOST REGULATOR

ISL78113A: High efficiency 500mA synchronous boost converter

- Output disconnect during shutdown preventing output precharging and uncontrolled short-circuit current
- Input voltage range: 0.8V to 4.7V
- Output current: Up to 500mA \(V_{\text{BAT}} = 3\text{V}, V_{\text{OUT}} = 5\text{V}\)
- Logic control shutdown \(I_{\text{Q}} < 1\mu\text{A}\)
- 2MHz switching frequency
- Forced PWM Mode Operation
- Up to 95% efficiency at typical operating conditions
- Fault protection: OVP, OCP, OTP, UVLO
- 2mmx2mm 8 Ld DFN package
SYNCHRONOUS BUCK REGULATORS

ISL78236: Dual 3A current sharing 2.5MHz high efficiency synchronous buck regulator

- Dual 3A high efficiency synchronous buck regulator with up to 95% efficiency
- 6A current sharing mode
- 2% output accuracy over temperature/load/line
- 2.5MHz switching frequency
- External synchronization up to 8 MHz
- Internal digital soft-start: 1.5ms
- Internal current mode compensation
- Peak current limiting and hiccup mode short circuit protection
- Reverse overcurrent protection
- 24 Ld 4x4mm QFN package

Applications

- Embedded processor power: μC/μP, FPGA and DSP power

ISL78213 / ISL78214: 3A/4A low Iq 1MHz high efficiency synchronous buck regulator

- Pin-to-pin compatible 3A/4A integrated FET regulators
- V_in range: 2.7V to 5.5V
- V_out range: 0.8V to V_IN
- ISL78213: 3A continuous load current
- ISL78214: 4A continuous load current
- Current mode control
- Flexible operation mode: selectable PFM/PWM mode
- Highest light load efficiency: 35μA quiescent current
- High switching frequency: 1MHz
- External synchronization capability

Applications

- Automotive power
- DC/DC POL modules
- μC/μP, FPGA and DSP power

Up to 95% Efficiency
ISL78228: Dual low quiescent current, 2.25MHz high efficiency synchronous buck regulator

The ISL78228 is a high efficiency, dual synchronous step-down DC/DC regulator that can deliver up to 800mA continuous output current per channel. The supply voltage range of 2.75V to 5.5V allows for the use of a 3.3V or 5V input.
- Dual 800mA output current
- 30μA standby and 6.5μA shutdown current
- Internal current mode compensation
- 100% maximum duty cycle for lowest dropout
- Selectable forced PWM mode and PFM mode
- External synchronization up to 4MHz
- Start-up with pre-biased output

ISL78322: Dual 2A/1.7A low quiescent current 2.25MHz high efficiency synchronous buck regulator

The ISL78322 is a high efficiency, dual synchronous step-down DC/DC regulator that can deliver up to 2A/1.7A continuous output current per channel. The channels are 180° out-of-phase for input RMS current and EMI reduction. The supply voltage range of 2.8V to 5.5V allows for the use of a single Li+ cell, three NiMH cells or a regulated 5V input.
- Dual 2A/1.7A high efficiency synchronous buck regulator with up to 97% efficiency, low Iq (40μA)
- Outputs 180° out-of-phase
- Start-up with pre-biased output
- Selectable forced PWM mode and PFM mode
- External synchronization up to 8MHz
- Negative current detection and protection

- Soft-stop output discharge during disable
- Internal digital soft-start: 2ms
- Power-Good (PG) output with 1ms delay
- 10 Ld 3x3mm DFN package
- For higher output current capability consider the ISL78322 (see below)
**AUTOMOTIVE POWER PRODUCTS**

**ISL78233/ISL78234/ISL78235: Single compact 3, 4, & 5A 2MHz synchronous buck regulators**

- Peak current mode control
- 2.7 to 5.5V input voltage range
- Continuous current to 5A
- Efficiency up to 95%
- Adjustable switching frequency from 500kHz to 4MHz
- External synchronization up to 4MHz
- Optional PFM mode for light load efficiency enhancement
- Very low on-resistance FETs, HS: 35mΩ LS: 11mΩ
- 100ns guaranteed minimum on-time supports wide step-down ratio
- 1% reference accuracy over temperature
- Internal 1ms or externally adjustable soft-start
- Over-temperature, over current, over voltage, and negative over current protections

**STANDARD BUCK REGULATORS**

**ISL78208: Dual 3A standard buck regulator**

- Wide input voltage range from 4.5V to 28V
- Adjustable output voltage with continuous output current up to 3A
- Current mode control
- Adjustable switching frequency from 300kHz to 2MHz
- Current sharing parallel outputs support single 6A output
- Independent power-good detection
- Selectable in-phase or out-of-phase PWM operation
- Independent, sequential, ratiometric or absolute tracking between outputs
- Internal 2ms soft-start time
- Overcurrent/short circuit protection, thermal overload
- -40 to 105 °C operation
- Supplied in 32 Ld 5x5mm wettable flank QFN package
ISL78210: Automotive PWM DC/DC voltage controller

- Input voltage range: 3.3V to 25V
- Output voltage range: 0.5V to 3.3V
- Output load to 30A
- Simple resistor programming for output voltage
- ±0.75% system accuracy: -40°C to +105°C
- Capacitor programming for soft-start delay
- Fixed 300kHz PWM frequency in continuous conduction
- External compensation affords optimum control loop tuning
- Automatic diode emulation mode for highest efficiency
- Integrated high-current MOSFET drivers and schottky boot-strap diode for optimal efficiency
- Choice of over-current detection schemes

ISL78211: Automotive single-phase core regulator for IMVP-6™ CPUs

- Precision single-phase CORE voltage regulator
- 0.5% system accuracy over -10°C to 100°C temperature range
- 0.8% system accuracy over entire temperature range
- Enhanced load line accuracy
- Internal gate driver with 2A driving capability
- Microprocessor voltage identification input
- 7-Bit VID input
- 0.300V to 1.500V in 12.5mV steps
- Support VID change on-the-fly
- Multiple current sensing schemes supported

- Lossless inductor DCR current sensing
- Precision resistive current sensing
- Power-Good monitor for soft-start and fault detection
- 16 Ld 2.6 x 1.8mm µTQFN package

ISL78211: Automotive single-phase core voltage regulator for IMVP-6™ CPUs

- Choice of over-current detection schemes
- Lossless inductor DCR current sensing
- Precision resistive current sensing
- Power-Good monitor for soft-start and fault detection
- 16 Ld 2.6 x 1.8mm µTQFN package

Application Schematic with DCR Current Sense

Typical ISL78211 Circuit Configuration
HIGH POWER CONTROLLERS AND FET DRIVERS

**ISL78220 / ISL78225: Multi-phase boost PWM controller with phase dropping enhancement**

- Peak current mode PWM control with adjustable slope compensation
- Precision resistor/DCR current sensing
- Accurate channel-current balancing
- Accurate total current monitoring pin (I\text{OUT})
- ISL78220 - 2, 3, 4 or 6-phase operation
- ISL78225 - 2, 3 or 4-phase operation
- Adjustable phase dropping/diode emulation/pulse skipping for high efficiency at light load
- Phase dropping facilitated with ISL78420 tri-level input FET driver
- Adjustable [75kHz to 1MHz] switching frequency
- Adjustable maximum duty cycle
- Frequency synchronization
- Dedicated PWM invert signal allows use of inverting or non-inverting FET drivers
- Input & output over-voltage detection
- Secondary V\text{REF2} input with fast response to facilitate audio envelope tracking
- Configurable as multi-phase buck
- 44 Ld TQFP package

MOSFET DRIVERS

**ISL78420: 100V, 2A peak, high frequency half-bridge driver with adjustable dead time**

- Tri-Level PWM input for single input switch control
  - Ideal in phase shedding multi-phase power supplies
  - Ideal companion product to ISL78220/225
- Bootstrap supply max voltage to 114 VDC
- Break-before-make dead-time prevents shoot-through
  - Adjustable up to 250ns
- Wide supply voltage range (8V to 14V)
- Supply under-voltage protection
- 1.6Ω/1Ω typical output pull-up/pull-down resistance
- 14-ld HTSSOP package compliant with 100V conductor spacing guidelines per IPC-2221
Intersil has one of the largest portfolios of video semiconductor solutions for automotive infotainment display applications. As a pioneer in this market, we have leveraged our extensive mixed signal video and display processing expertise to create unique and robust IC products specifically tailored to the requirements of the automotive display market.

AUTOMOTIVE INFOTAINMENT AND DISPLAY PRODUCTS

TECHWELL ADVANCED DISPLAY CONTROLLERS

Intersil’s TW88xx automotive infotainment display IC product line is defined by feature rich, highly integrated semiconductor solutions that incorporate many key function blocks for front console, rear seat entertainment, and rear camera display applications. The product family includes an analog video decoder, high quality H/V scaler, 2D de-interlacer, and embedded timing controllers. In addition, certain TW88xx products include advanced technologies such as a 3D adaptive comb filter, 3D noise reduction, an embedded MCU, a touchscreen controller, bit-map OSD, graphic overlay with alpha blending, PIP/POP, dual view display support, and a single channel LVDS interface to directly drive high resolution OpenLDI (LVDS) LCD panels.

The TW88xx product line is designed for OEM Automotive applications and therefore support -40°C to +85°C or +105°C and all of the products listed in this section are AEC-Q100 qualified.

Samples and evaluation boards are available for all parts listed in this section. Contact your local sales office for your samples and evaluation boards.
TW8836: Advanced LCD controller with built-in decoder, triple ADCs, LVDS & TTL inputs, MCU, OSD, TCON and LVDS panel interface

The TW8836 is a highly integrated LCD video processor that incorporates many of the features required to create a multi-purpose LCD display system into a single package. It can take virtually any type of video input: analog composite & s-video, analog RGB, digital RGB, and LVDS, and it can drive almost any digital LCD panel up to WXGA+ resolution (TTL, 1CH LVDS, and TCON panels). The built-in scaler and de-interlacer, as well as the image enhancement and On Screen Display capabilities make the TW8836 a truly robust LCD Controller.

- Inputs: CVBS (differential or single-ended), S-Video, analog RGB/YPbPr (up to 1080p), Digital RGB (24-bit up to 1080p), 1 channel OpenLDI (LVDS)

- Outputs:
  - TFT panel support: TTL, 1 channel OpenLDI (LVDS), and programmable Timing Controller (up to 1366x768 resolution, 85MHz)
  - Separate BT.656 output path
  - Independent horizontal and vertical scalers with 2D De-interlacer
  - Font OSD and SPI OSD
  - Integrated 8-bit MCU, 4-wire resistive touch screen controller (12-bit ADC), and spread spectrum PLL
  - Short-to-battery & short-to-ground detection
  - 128 LQFP

TW8834: LCD video processor with built-in decoder, LVDS and TTL inputs, BT.656 output and LVDS panel interface

Highly integrated LCD video processor supports boot-up and rear camera display in less than 500ms. The TW8834 incorporates a high quality 2D comb NTSC/PAL/SECAM video decoder which support single-ended, differential, and pseudo differential CVBS signals, an LVDS or TTL digital input interface. It has a high quality scaler and de-interlacer, Font OSD engine, and a LVDS, TTL, or TCON panel interface.

- Inputs: CVBS (differential or single-ended), S-Video, digital RGB (24-bit up to 1080p) or 1 channel OpenLDI (LVDS)

- Outputs:
  - TFT panel support: TTL, 1 channel OpenLDI (LVDS), and programmable timing controller (up to 1366x768 resolution, 85MHz)
  - Separate BT.656 output path
  - Independent horizontal and vertical scalers with 2D De-interlacer
  - Font OSD, short-to-battery & short-to-ground detection
  - 100 TQFP
TW8824: Low cost LCD controller w/ 1.8V & 3.3V DRGB input + LVDS & BT.656 output

The TW8824 is a highly integrated LCD video processor that incorporates many of the key features required to create a multipurpose LCD display system into a single package. This includes a high quality 2D comb NTSC/PAL/SECAM video decoder, which supports both single-ended and differential CVBS signals, a digital RGB input interface, high quality scaler and deinterlacer, a Font OSD engine and LVDS, TTL or TCON output panel interfaces.

- Input Support:
  - Analog CVBS – 6x single ended or 3x differential (2D comb: NTSC/PAL/SECAM)
  - DTV – 24-bit Digital RGB – up to 1080p, 1.8V & 3.3V

- Output Support:
  - TTL/TCON – Up to 1366x768, 3.3V
  - LVDS – 1CH OpenLDI (sharing pins with TTL)
  - BT.656 – from any input path or post scaler, 1.8V/3.3V

• Embedded image enhancement such as programmable CTI, black/white stretch, hue, brightness, contrast, sharpness, etc.
• Programmable gamma correction table
• 80 LQFP

TW8832 (S): Cost-effective, highly integrated LCD controller for digital LCD panels

The TW8832 is a highly integrated cost-effective LCD controller supporting digital LCD panels. TW8832 integrates a high quality NTSC/PAL/SECAM 2D comb video decoder, 2D de-interlacer, and an improved H/V scaling engine. Additional features include a robust font-based OSD engine, independent mirroring functionality for the scaler and OSD, serial RGB output, and an LED backlight controller. The TW8832S version also supports a proprietary SPI Bitmap OSD.

• Inputs: CVBS, S-Video, and analog RGB/YPbPr (up to 720p), digital RGB (8-bit for BT.656)
• Output: TFT panel support: TTL, TCON, & serial RGB (up to SVGA resolution)
• High quality horizontal and vertical scalers with 2D De-interlacer
• Font OSD & SPI OSD (bitmap overlay - 4 windows)
TW8809: Digital RGB to BT.656 format converter with scaling & progressive output

The TW8809 is a low cost video format converter that can convert either analog CVBS or 24-bit digital RGB format video and output these signals in ITU-R BT.656 format. The video sources can be scaled and de-interlaced so that the ITU-R BT.656 output is already formatted to the desired resolution and can be either progressive or interlaced format. In addition, TW8809 has a built-in font OSD engine as well as image enhancement capabilities.

- Supports digital input: YCbCr / 24-bit RGB up to 720p resolution
- Supports analog CVBS input (2 single ended or 1 differential)
- Output support: ITU-R BT.656 (interlaced or progressive) up to SVGA resolution
- Font OSD with 256 Font RAM / 512 display RAM (4 windows)
- Short diagnostics
- 56 Ld QFN package (wettable flanks QFN available)

TW8819: Low-cost LCD controller solution (for RCD applications)

The TW8819 is an ultra low-cost highly integrated LCD controller targeting basic Rear Camera Display (RCD) applications. It combines a high quality 2D comb NTSC/PAL/SECAM video decoder, a powerful H/V scaler, font based OSD engine, and image enhancement functions. TW8819 supports differential and single-ended analog composite video inputs and the output supports a wide variety of digital LCD panel types.

- Supports analog CVBS input (4 single ended or 2 differential)
- Panel output support 24-bit & 18-bit TTL up to WSVGA resolution
- Also supports TCON and serial (8-bit) RGB panel outputs
- Font OSD with 256 font RAM / 512 display RAM (4 windows)
- Short diagnostics & image enhancement built-in

TW8809 Functional Block Diagram

TW8819 Functional Block Diagram
**VIDEO DECODERs**

**TW9990: 1-Channel, low power NTSC/PAL/SECAM video decoder with differential inputs**

TW9990 is Intersil’s next generation low-cost multi-standard video decoder with differential CVBS input support. It consumes 100mW in typical composite video applications, and has a power-down mode as well. The TW9990 supports both single ended and differential input types, and has short detection capabilities making it an ideal analog video decoder for Automotive applications.

- NTSC (M, 4.43) and PAL (B, D, G, H, I, M, N, N combination), PAL (60), SECAM support with automatic format detection
- Software selectable analog input control allows for combinations of single ended CVBS, differential CVBS, and S-video

**TW9992: Low power NTSC/PAL video decoder with differential CVBS inputs and MIPI-CSI2 output interface**

The TW9992 is a low power NTSC/PAL analog video decoder that is designed for automotive applications. It supports single-ended, differential and pseudo differential composite video inputs as well as S-Video. Integrated short-to-battery and short-to-ground detection, advanced image enhancement capabilities such as the programmable Automatic Contrast Adjustment (ACA) and the MIPI-CSI2 output interface make the TW9992 an ideal solution for demanding automotive camera applications.

- NTSC/PAL 10-bit ADC analog video decoder with 4H adaptive comb filter
- Software selectable analog input control allows for combinations of single ended or differential CVBS
- Automatic Contrast Adjustment (ACA)
- MIPI-CSI2 output interface
- Low power consumption: 100mW typical
- 32 WQFN

AUTOMOTIVE INFOTAINMENT AND DISPLAY PRODUCTS

VIDEO DECODERS (continued)

TW9984: 4-channel differential input video decoder with analog video encoder

The TW9984 includes four high quality NTSC/PAL/SECAM video decoders that convert analog composite video signals to digital component YCbCr data. Each channel contains a 10-bit ADC with application selectable differential or single-ended analog video input options, proprietary clamp and gain controllers, image enhancement capabilities, an anti-aliasing filter, and utilizes a 4H comb filter. In addition, an integrated NTSC/PAL analog video encoder makes the TW9984 an ideal solution for around view applications.

- Integrates four NTSC/PAL analog video decoders and 10-bit ADCs with differential, pseudo differential and single-ended inputs
- Integrates one analog video encoder to re-encode video to CVBS format
- Integrates programmable automotive short diagnostics -- short-to-battery and short-to-ground detection -- on each differential input channel
- 68 WQFN

TW9966: 4-channel analog video decoders with analog video encoder for around view applications

The TW9966 includes four independent high quality NTSC/PAL/SECAM analog video decoders as well as a single analog video encoder. Each decoder contains a 10-bit ADC and proprietary clamp and gain controllers. The integrated PLL allows for flexibility when outputting the digitized video data as either 4 standard BT.656 streams, or time multiplexed outputs with 2 channels at 54MHz or 4 channels at 108MHz (per 8-bit bus).

- Superior image with IF compensation filter, color transient improvement (CTI), automatic white peak and programmable hue, saturation, contrast, brightness and sharpness
- Proprietary fast video locking system for non-real-time application
- Supports the standard ITU-R BT.656 format or time multiplexed output with 54/108MHz
- Provides simultaneous four channel Full D1 and CIF time-multiplexed outputs with 54MHz
- Ultra low power consumption (Typical 666.84mW)
- 128 LQFP
TFT LCD POWER SUPPLY

**ISL78010: Boost with integrated FET, 2 positive linear regulator controller and negative linear regulator controller**

- High performance boost regulator with integrated FET
  - 2A switch current
  - Up to 20V output
  - Current mode control
- \( V_{\text{ON}} \) and \( V_{\text{LOGIC}} \) linear regulator controllers 2% accuracy
- \( V_{\text{OFF}} \) linear regulator controllers with 3% accuracy
- \( V_{\text{LOGIC}} \), \( V_{\text{OFF}} \), \( V_{\text{BOOST}} \) \( V_{\text{ON}} \) or \( V_{\text{BOOST}} \) \( V_{\text{LOGIC}} \) \( V_{\text{OFF}} \) \( V_{\text{ON}} \) sequence control
- Programmable sequence delay
- Configurable sequence delay
- 32 TQFP

**ISL78419: Integrated automotive TFT-LCD power supply regulator with \( V_{\text{COM}} \) DCP**

- 2.5V to 5.5V input
- 1.5A, 0.18Ω integrated boost FET
- \( V_{\text{OFF}} \) \( V_{\text{OFF}} \) supplies generated by charge pumps driven by the boost switch node
- 350mA LDO for \( V_{\text{LOGIC}} \) channel
- 600kHz/1200kHz selectable switching frequency
- Integrated gate pulse modulator
- Reset signal generated by supply monitor
- Integrated \( V_{\text{COM}} \) amplifier
- Integrated digitally controlled potentiometer (DCP)
- UVLO, UVP, OVP, OCP, and OTP protection
- -40°C to 105°C operation
- Supplied in 5x4 mm 28 Ld TQFN package
LED BACKLIGHT DRIVERS

ISL78100: High-power LED backlight driver with an integrated 36V FET

The PWM converter runs from an internally generated 1 MHz clock. With efficiencies over 90%, the regulator provides tight control of LED current and may be configured in either boost or buck topologies, allowing from 3 to 8 series diodes to be driven from wide input voltages.

- Drives 3 to 8 high-power LEDs in series, up to 32V
- 2.7V to 16V input voltage range
- Boost or buck configurable switch
- 3A integrated FET
- Automotive load dump protection
- Light output temperature compensation
- LED over-temperature protection
- LED disconnect
- PWM/analog light level control

Dimming Linearity

Direct PWM dimming duty cycle linear from 0.007% to 100% at 200Hz
SERDES

ISL76321 / ISL76322: Automotive SerDes video link

ISL76321 - 16(+3)-bits, 6 to 45MHz Pixel Clock Serdes

ISL76322 - 24(+3)-bits, 6 to 45MHz Pixel Clock Serdes

A simple, low overhead solution to video data transmission in the car. Intersil’s SerDes enables transmission of video data together with bi-directional control down a single shielded twisted pair (STP) cable. The ISL76321/41 are the only products in their class to use a transceiver at both cable ends allowing on-demand, primary data direction change.

These SerDes links offer user flexibility through their I2C programmability, including 16 levels of cable equalization and pre-emphasis. A unique fast locking circuit at the receiver ensures excellent link performance even when exposed to considerable noise.

- Tx pre-emphasis and Rx-equalization
- Allows for longer cable runs and/or cable cost optimization
- EQ provides maximum cable drive capability whilst minimizing EMI
- Unique back-channel solution
- Allows low cost end-to-end control data communication
- I2C control interface with four I2C addresses
- Unique transceiver design
- Reduces inventory management
- Superior line rate locking performance
- Ensures continuous video transmission in the face of noise
- Hot-plugging with automatic re-lock with every Hsync
- DC balanced line coding via 8B/10B allows AC coupling
- 48 Ld QFN package
Hybrid electric, plug-in hybrid electric and electric vehicle (HEV/PHEV/EV battery management solutions)

Intersil's automotive grade Li-Ion battery management and safety monitoring chipset solutions are specifically designed to meet the stringent safety, reliability and performance requirements of next generation Hybrid Electric Vehicle (HEV), Plug-in Hybrid Electric Vehicle (PHEV) and Electric Vehicle (EV) applications.

**HYBRID/ELECTRIC VEHICLE POWER**

**MULTI-CELL BALANCING (MCB)**

**ISL78600: 12 cell li-ion battery pack manager**

- Up to 12 cell voltage management
- Supports full range of Li-Ion cell chemistries
- Cell voltage measurement accuracy ±2.5mV
- Also available in ±10mV version – ISL78622
- VBAT measurement accuracy ±100mV
- Cell voltage scan rate of 20μs per cell
- Proprietary daisy chain communications system
- Robust EMI performance
- Excellent system transient resistance
- Passive balancing
- Integrated system diagnostic functions:
  - Cell over and under-voltage
  - Over temperature
  - Open cell monitoring wires
  - Open temperature monitoring wires
  - VBAT and VSS connection integrity
  - Voltage reference function
  - Oscillator function
- 64 Ld TQFP package

The automotive grade (AEC-Q100), ISL78600 12-cell battery pack manager provides built-in fault detection for all of its major internal functions and detects external faults such as open wire, over- and under-voltage as well as temperature and cell balancing faults to mitigate battery pack failures.

Overall, the highly integrated functionality of the ISL78600 offers a number of benefits and can significantly reduce the overall battery management costs of HEV/PHEV/EV battery packs and their associated systems.
**48/12V BI-DIRECTIONAL DC/DC**

**ISL78225EVB: 48/12V bi-directional DC/DC converter demonstrator**

Designed to support future dual battery power systems now being considered in Europe, this 48/12V bi-directional DC/DC system combines significant power conversion capabilities yet maintains impressive conversion efficiencies above 95%. The system exploits Intersil’s ISL78220/5 multi-phase PWM controllers to provide a high performance converter in a dense form factor. The demonstrator (ISL78225EVAL2Z) is capable of supplying 1.5kW using a 4-phase configuration (ISL78225). In fact, the modular PWM controllers can easily be exploited to develop conversion designs up to 4kW.

AMBIENT LIGHT SENSORS

ISL76683: Digital ambient light sensor

The ISL76683 is an integrated light sensor with an internal integrating ADC intended for automotive applications. The ADC provides 16-bit resolution and is capable of rejecting 50Hz and 60Hz flicker from artificial light sources. The ISL76683 is packaged in a tiny 6 pin package with the benefit of its digital interface offers both programmable features and a robust, low cost link to a microcontroller.

- Four sensitivities range selection via I2C:
  - Range 1 = 0 lux to 1000 lux
  - Range 2 = 0 lux to 4000 lux
  - Range 3 = 0 lux to 16,000 lux
  - Range 4 = 0 lux to 64,000 lux
- Human eye response (540nm peak sensitivity)

ISL76671: Low light optimized ambient light sensor

Offered in a tiny 4.2mm² package the ISL76671 will measure incident light levels to lower than 0.01 lux. As such, it’s an ideal solution for light detection when hidden behind darkened glass and plastic bezels in a wide range of light based control applications. With temperature compensation and excellent IR rejection, the ISL76671 is an economic and easy to use alternative to other forms of optical sensors such as photo diodes & transistors as it can be directly connected to an ADC sampling system.

- Operates down to < 0.01 lux
- Ultra-low operating current < 5µA
- 1.8V to 3.0V supply range
- Full scale determined by low cost bias resistor
- Square root law voltage output

- Close to human eye spectral response
- Fast response time 30ms
- -40 to 105°C operation
- Tiny 2.1 x 2.1mm ODFN package
USB/ANALOG SWITCHES

ISL76120: USB 2.0 high/full speed multiplexer

Intersil's ISL76120 dual 2:1 multiplexer IC is a single supply part that contains two SPDT (Single Pole/Double Throw) switches configured as a DPDT. The part was designed for switching between USB High-Speed and USB Full-Speed sources in a variety of applications. A high ESD rating combined with ultra-low supply current make this an ideal automotive USB interface solution.

- High speed (480Mbps) and full speed (12Mbps) signaling capability per USB 2.0
- 1.8V logic compatible (2.7V to +3.6V supply)
- Enable pin to open all switches, simplifies multiple USB client management
- -3dB frequency

ISL76123: Single supply single pole, double throw (SPDT) analog switch

The Intersil ISL76123 is a precision, bidirectional, SPDT analog switch designed to operate from a single 2.7 to 12V supply.

- Fully specified for 3.3V, 5V, and 12V supplies
- ON resistance ($R_{ON}$): 150 ohm at 12V
- $R_{ON}$ matching between channels: ≤ 1Ω
- Low charge injection: 5pC (Max)
- Low power consumption ($P_J$): < 15μW at 12V
- Low leakage current: 10nA (typ)
- Fast switching action

- $t_{ON}$: 28ns & $t_{OFF}$: 20ns
- Guaranteed break-before-make operation
- Minimum 2kV ESD protection
- 6 Ld SOT23 package

Crosstalk and Off Isolation

Space-saving Tiny SOT-23 Package (3mm x 3mm)
